

VERSION VERTICAL AWNINGS

What is an awning made of?

Description

Elit Vertical is ideal for laterally complementing awning installations with Elit structures, although it can also be adapted for use in solid structure openings. Elit Vertical features an easy anchoring system, can be installed with or without Texpro, works with a fabric tensioning system and can incorporate horizontal reinforcement profiles to always ensure its perfect positioning between the guides.

Dimensions

*With a reinforced profile, the maximum fall is 2.30 m.

Operation

Features:

- Its clip anchoring system allows the fabric to be tensioned and fixed both at the end of its length and at intermediate positions.
- A middle reinforcement profile can be used to keep the fabric smooth and always in position between the guides.
- Its 40x120 guides adapt to the shape of the Elit profiles and ensure the complete blocking out of light on the sides of the awning.
- Helps to create private spaces in the garden, away from prying eyes.
